

“Complex Rehab Technology” Wheelchairs Differ from Standard Wheelchairs

Complex Rehab wheelchairs are configured to meet the specific needs of people with permanent disabilities and are vital to a small (9% of annual purchases) but CRITICAL segment of Medicare wheelchair users. Access to these specialized wheelchairs must be protected.

Complex Manual WCs (5% of Medicare)

- Intended for long-term use
- High Adjustability
- Provides Positioning
- Accommodates Orthopedic Issues
- Provides Pressure Management

Standard Manual WCs (95% of Medicare)

- Intended for short-term use
- Minimal to Zero Adjustability
- NO Positioning
- NO Orthopedic Accommodations
- Provides NO Pressure Management

Complex Power WCs (22% of Medicare)

- Intended for Perm./Progressive Diagnoses
- Advanced Electronics and Controls
- Provides Positioning
- Accommodates Orthopedic Issues
- Provides Pressure Management
- Offers Ventilator Accommodation

Standard Power WCs (78% of Medicare)

- Intended for Ambulatory Limitations
- Basic Joystick Drive ONLY
- NO Positioning
- NO Orthopedic Accommodations
- Provides NO Pressure Management
